Helicopter vs Car Travel Time Analysis

A Comprehensive Comparison of Traffic Scenarios
New York & Los Angeles

REVO Helicopter Services

Strategic Analysis Division

December 2025

Agenda

The Problem: Urban Traffic Congestion

The Challenge

- Business travelers need reliable airport access
- Traffic is unpredictable and often severe
- Missing flights = significant business impact
- Stress and time loss affect productivity

Worst Case Reality

During severe traffic:

4.68x travel time

12 km/h average speed

(barely faster than walking!)

Study Overview

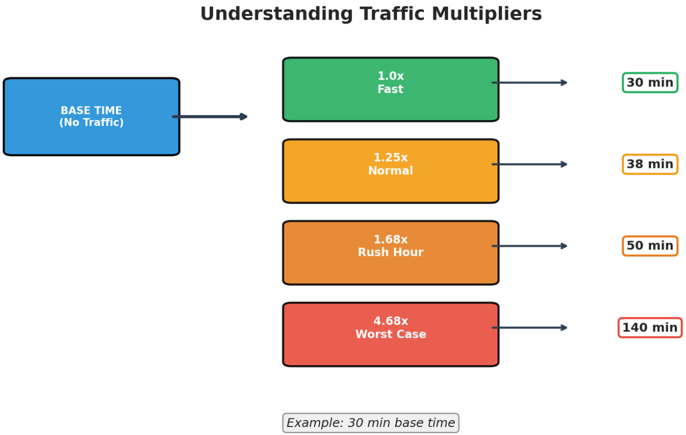
Scope

- **New York**: 70 wealthy ZIP codes → JFK
- **Los Angeles**: 44 wealthy ZIP codes → LAX
- **Data**: Google Traffic (Pessimistic)
- **Routing**: OSRM + FAA Helipad Data

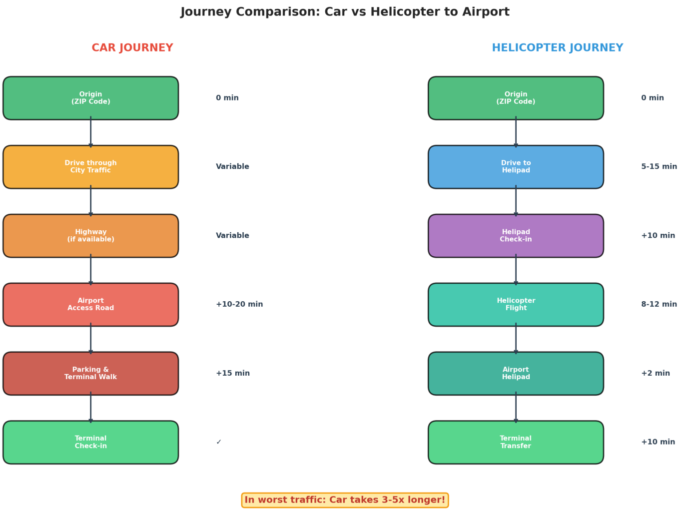
Key Numbers

114 ZIP Codes
65 Heliports
4 Traffic Scenarios
27 Manhattan ZIPs

Traffic Multipliers Explained



Journey Comparison: Car vs Helicopter



Helicopter Journey Components

Step 1: Drive to Helipad

- Affected by traffic
- Manhattan helipad priority
- Average: 5-15 minutes

Step 2: Check-in

- Fixed 10 minutes
- Security screening
- Boarding preparation

Step 3: Flight

- 200 km/h cruise speed
- Direct route
- 8-12 minutes typical

Step 4: Terminal Transfer

- Fixed 10 minutes
- Helipad to terminal
- Internal transport

Manhattan Helipad Network

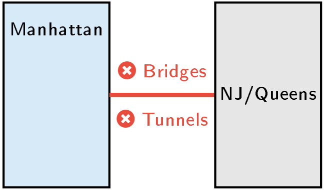
Approved Heliports

- **JRB**: Downtown/Wall St
- **JRA**: West 30th Street
- **6N5**: East 34th Street
- **3NY2**: Astoria (Queens)

Exclusions

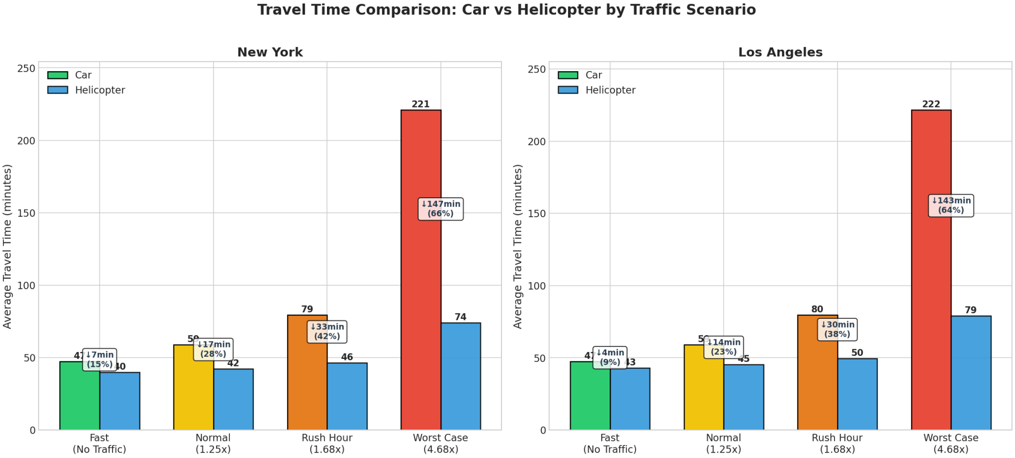
- Police Heliports
- One Police Plaza
- Newport Beach Police (LA)

Why Manhattan-Only?



Avoid congested crossings!

Scenario Comparison Overview

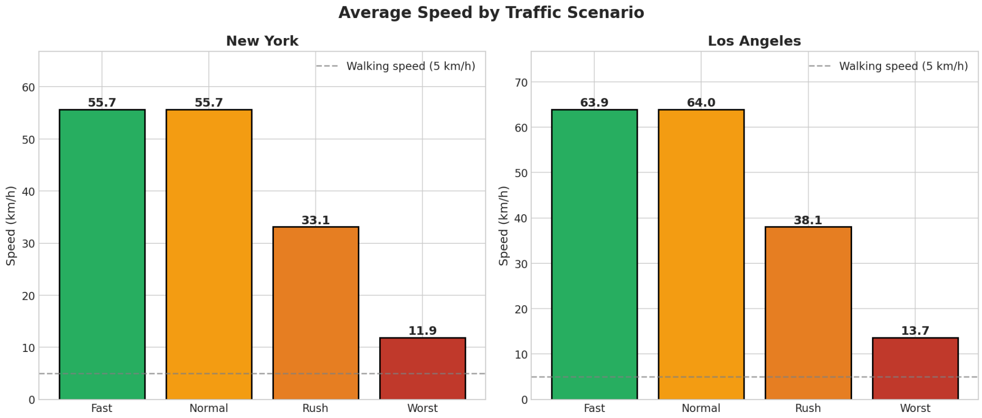


Key Statistics

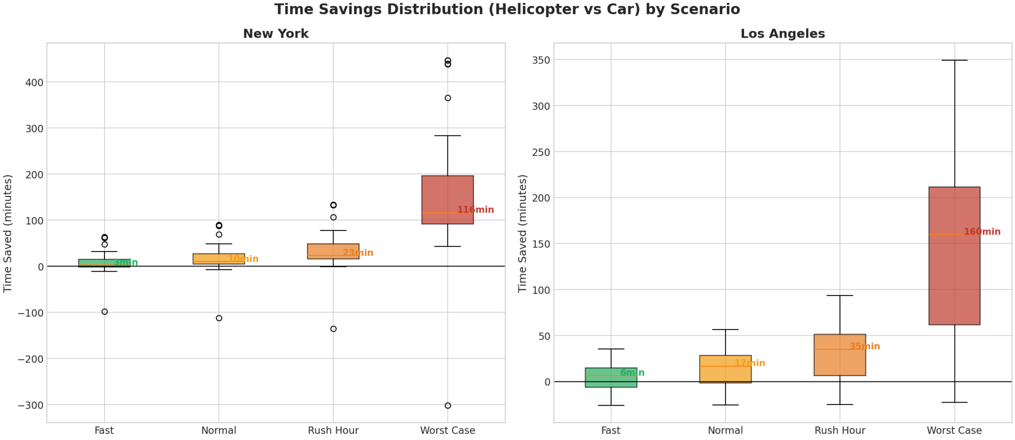
Metric	New York				Los Angeles			
	Fast	Norm	Rush	Worst	Fast	Norm	Rush	Worst
Car (min)	47	59	79	**221**	47	59	80	**222**
Heli (min)	44	46	49	**74**	46	48	52	**79**
Savings	3	13	30	**147**	1	11	28	**143**

Worst Case: Save 2+ Hours!

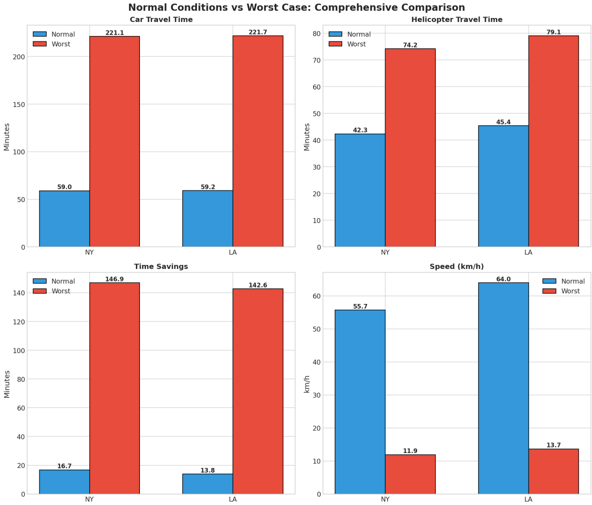
Speed Degradation by Scenario



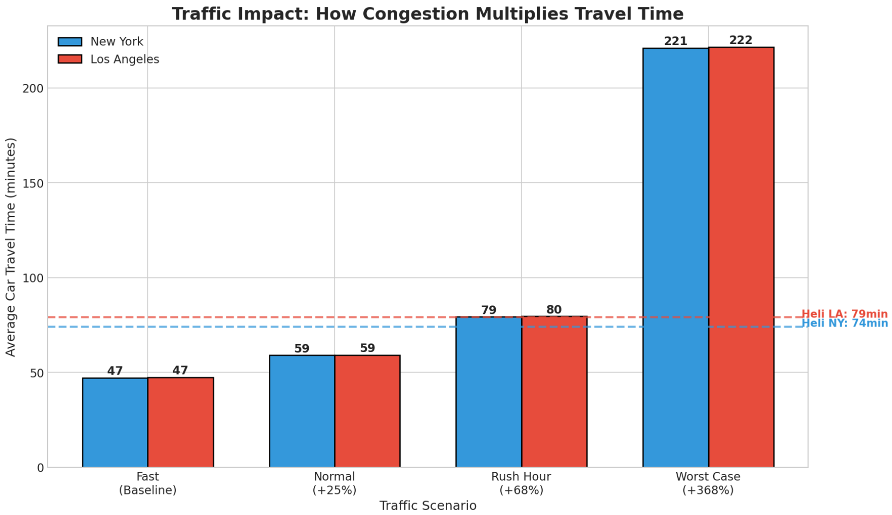
Time Savings Distribution



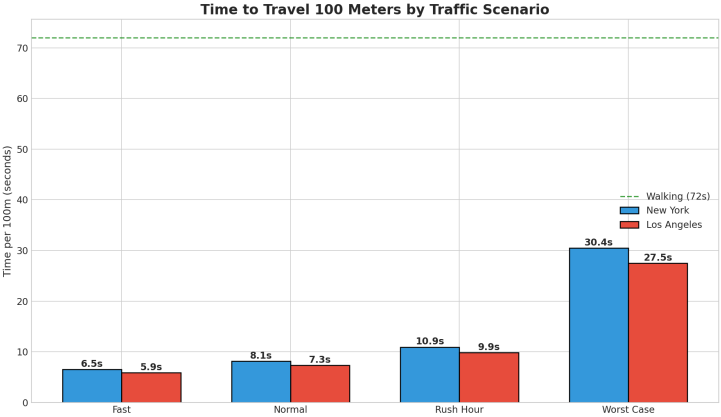
Normal vs Worst Case: The Dramatic Difference



How Traffic Multiplies Travel Time



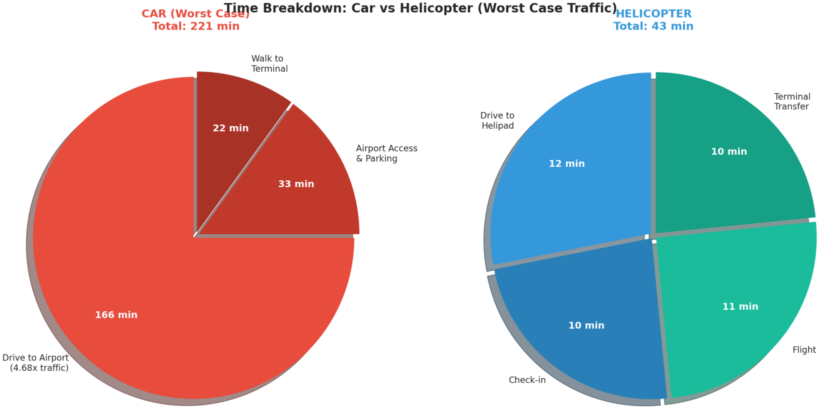
Time per 100 Meters



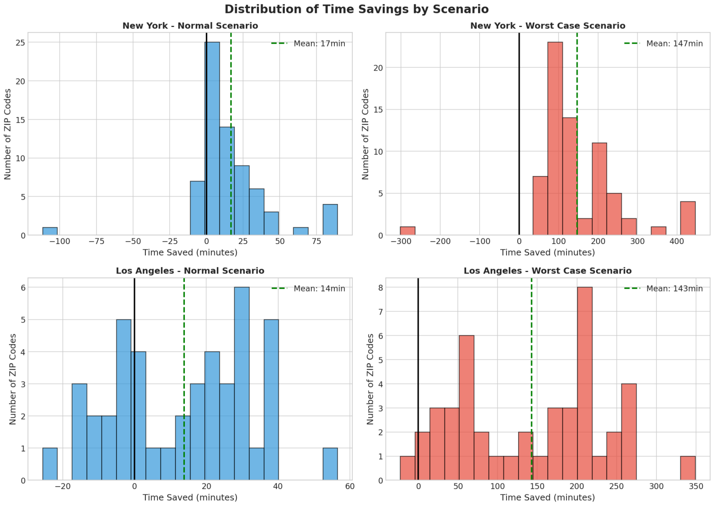
Worst Case: 30 sec / 100m

Walking: 72 sec / 100m

Time Breakdown: Worst Case



Savings Distribution Histogram



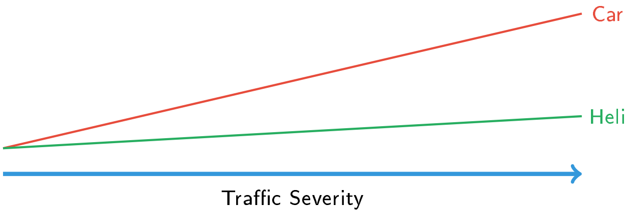
Why Helicopter Wins in Worst Case

Car Travel

- 100% affected by traffic
- Time increases 4.68x
- Unpredictable delays
- Stress and fatigue

Helicopter Travel

- Only 20% affected by traffic
- Time increases only 1.6x
- Predictable schedule
- Comfort and productivity



Business Value Proposition

Time Savings

147 min
(NY worst case)

Reliability

99%
advantage rate

Never Miss

Flights
predictable arrival

ROI Consideration

2+ hours saved = productive meeting time, reduced stress, guaranteed connections

Summary of Findings

	Los Angeles
70 ZIP codes analyzed	44 ZIP codes analyzed
27 Manhattan locations	Distributed coverage
147 min worst case savings	**143 min** worst case savings
66% time reduction	**64%** time reduction
99% show helicopter advantage	98% show helicopter advantage

Key Takeaway

The worse the traffic, the greater the helicopter advantage.
In extreme conditions, helicopter is the **only viable option** for time-sensitive travel.

Complete Summary Statistics

Comprehensive Scenario Comparison Summary

Metric	NY Fast	NY Normal	NY Rush	NY Worst	LA Fast	LA Normal	LA Rush	LA Worst
Car Time (min)	47	59	79	221	47	59	80	222
Heli Time (min)	40	42	46	74	43	45	50	79
Savings (min)	7	17	33	147	4	14	30	143
Savings (%)	15%	28%	42%	66%	9%	23%	38%	64%
Speed (km/h)	55.7	55.7	33.1	11.9	63.9	64.0	38.1	13.7
Time/100m (sec)	6.5	8.1	10.9	30.4	5.9	7.3	9.9	27.5
% Heli Advantage	56%	87%	97%	99%	59%	68%	82%	98%
